

Preston Primary School Adacemy – Calculation methods

Multiplication

Obj	Gui	Year 1	Ex	Obj	Gui	Year 2	Vid	Ex	Obj	Gui	Year 3	Vid	Ex
		<p>• Solve one-step multiplication problems using concrete objects, pictorial representations and arrays</p> <p>Understand multiplication is related to doubling and combining groups of the same size (repeated addition)</p> <p>Washing line, and other practical resources for</p>  <p>$2 + 2 + 2 + 2 = 10$ $2 \times 5 = 10$ 2 multiplied by 5 5 pairs 5 hops of 2</p>  <p>$5 + 5 + 5 + 5 + 5 = 30$ $5 \times 6 = 30$ 5 multiplied by 6 6 groups of 5 6 hops of 5</p> <p>Problem solving with concrete objects (including money and measures)</p> <p>Use cuisenaire and bar method to develop the vocabulary relating to 'times' – Pick up five, 4 times.</p> <p>Use arrays to understand multiplication can be done in any order (commutative).</p>  <p>$4 \times 2 = 8$ $2 \times 4 = 8$ $2 \times 4 = 8$ $4 \times 2 = 8$ 2 hops of 4 4 hops of 2</p>		<p>Expressing multiplication as a number sentence using x Using understanding of the inverse and practical resources to solve missing number problems.</p> <p>$7 \times 2 = \square$ $\square = 2 \times 7$ $7 \times \square = 14$ $14 = \square \times 7$ $\square \times 2 = 14$ $14 = 2 \times \square$ $\square \times \square = 14$ $14 = \square \times \square$</p> <p>• Solve multiplication problems, including missing number problems.</p> <p>Develop understanding of multiplication using array and number lines (see Year 1). Include multiplications not in the 2, 5 or 10 times tables.</p> <p>Begin to develop understanding of multiplication as scaling (3 times bigger/taller)</p>  <p>$4 \times 3 = 12$</p>  <p>double 4 is 8 $4 \times 2 = 8$</p> <p>Doubling numbers up to 10 + 10 Link with understanding scaling Using known doubles to work out double 2d numbers (double 15 = double 10 + double 5)</p> <p>Towards written methods</p> <p>Use jottings to develop an understanding of doubling two digit numbers.</p> $\begin{array}{r} 16 \\ \swarrow \quad \searrow \\ 10 \quad 6 \\ \times 2 \quad \quad \quad \times 2 \\ \hline 20 \quad 12 \end{array}$	<p>Missing number problems Continue with a range of equations as in Year 2 but with appropriate numbers.</p> <p>Mental methods Doubling 2 digit numbers using partitioning</p> <p>Demonstrating multiplication on a number line – jumping in larger groups of amounts</p> <p>$13 \times 4 = 10$ groups $4 = 3$ groups of 4</p> <p>• Write and calculate mathematical statements for multiplication using x tables they know including 2d x 1d</p> <p>Written methods (progressing to 2d x 1d)</p> <p>Developing written methods using understanding of visual images</p>  <p>Develop onto the grid method</p>  <p>Give children opportunities for children to explore this and deepen understanding using Dienes apparatus and place value counters.</p>

		<p>Use the Singapore bar method for multiplication.</p>  <p>whole one part x number of parts = whole part</p> <p>larger quantity smaller quantity x multiples = larger quantity smaller quantity</p>		<p>Use the Singapore bar method for multiplication.</p>		<p>Use the Singapore bar method for multiplication.</p>			<p>Use the Singapore bar method for multiplication.</p>				

Multiplication

Year 1	Year 2	Year 3
<p>Mental Strategies</p> <ul style="list-style-type: none"> Children should experience regular counting on and back from different numbers in 1s and in multiples of 2, 5 and 10. Children should memorise and reason with numbers in 2, 5 and 10 times tables They should see ways to represent odd and even numbers. This will help them to understand the pattern in numbers. <div style="text-align: center;"> </div> <p>Children should begin to understand multiplication as scaling in terms of double and half. (e.g. that tower of cubes is double the height of the other tower)</p> <p>Vocabulary Ones, groups, lots of, doubling, repeated addition, groups of, lots of, times, columns, rows, longer, bigger, higher <i>etc</i>, times as (big, long, wide <i>...etc</i>)</p> <p>Generalisations</p> <ul style="list-style-type: none"> Understand 6 counters can be arranged as 3+3 or 2+2+2 Understand that when counting in twos, the numbers are always even. <p>Some Key Questions Why is an even number an even number? What do you notice? What's the same? What's different? Can you convince me? How do you know?</p>	<p>Mental Strategies</p> <ul style="list-style-type: none"> Children should count regularly, on and back, in steps of 2, 3, 5 and 10. Number lines should continue to be an important image to support thinking, for example Children should practise times table facts $2 \times 1 =$ $2 \times 2 =$ $2 \times 3 =$ <p>Use a clock face to support understanding of counting in 5s. Use money to support counting in 2s, 5s, 10s, 20s, 50s</p> <p>Vocabulary multiple, multiplication array, multiplication tables / facts, groups of, lots of, times, columns, rows</p> <p>Generalisation</p> <ul style="list-style-type: none"> Commutative law shown on array (video) Repeated addition can be shown mentally on a number line Inverse relationship between multiplication and division. Use an array to explore how numbers can be organised into groups. <p>Some Key Questions What do you notice? What's the same? What's different? Can you convince me? How do you know?</p>	<p>Mental Strategies</p> <ul style="list-style-type: none"> Children should continue to count regularly, on and back, now including multiples of 4, 8, 50, and 100, and steps of 1/10. The number line should continue to be used as an important image to support thinking, and the use of informal jottings and drawings to solve problems should be encouraged. Children should practise times table facts $3 \times 1 =$ $3 \times 2 =$ $3 \times 3 =$ <p>Vocabulary partition, grid method, inverse</p> <p>Generalisations</p> <ul style="list-style-type: none"> Connecting $\times 2$, $\times 4$ and $\times 8$ through multiplication facts Comparing times tables with the same times tables which is ten times bigger. If $4 \times 3 = 12$, then we know $4 \times 30 = 120$. Use place value counters to demonstrate this. When they know multiplication facts up to $\times 12$, do they know what $\times 13$ is? (i.e. can they use 4×12 to work out 4×13 and 4×14 and beyond?) <p>Some Key Questions What do you notice? What's the same? What's different? Can you convince me? How do you know?</p>
